

“ I chose Absolute because of a personal recommendation. The workmanship has been excellent... ”

August 2010

A retired bank manager and his wife from Helensburgh were already exponents of 'going green' but wanted to increase their environmentally friendly ways by looking into solar energy. Now, having installed both solar PV and thermal panels at their Clydeside home in September 2010, Julian Rey is reaping the benefits of Absolute's renewable energy solutions.

**"My wife is a great believer in green energy and we drive a hybrid car for that reason,"** explained Julian. "We live in a conservation area but were delighted when planning permission was approved quite quickly.

**"We were attracted by the feed-in tariff, meaning savings on our energy bills. PV also provides us with the ability to use or sell back to the grid that electricity we have generated. In fact, our electrician believes we will recoup our investment within five to eight years on the basis of my quarterly readings."**

The couple, who also upgraded their combi-boiler to a condensing system boiler which will work more effectively with their SolarThermal specifications, were delighted with the Absolute experience.

"I chose Absolute because of a personal recommendation. The workmanship has been excellent and it only took the installers three days."

The cost was £11442 for the 2.16kw PV system and £3975 for the Solar Thermal.
